

[housing]

It is the logic and the scale of domestic space that rules the construction of the residential area inside the campus, in contrast the large scale that designs the core and the sports park spaces. This set of neighbourhoods is mainly built by the sequence of Residence Halls, which functions as a filter between the interior and the exterior of the campus in this western front. More densely occupied in the extremes North and South, the neighbourhood located next to the commons is built with smaller units and larger outdoor spaces, which contrast with the big scale and character of the Core. The Faculty residences, isolated blocks of a smaller dimension, are the minimum unit that builds this territory. Its position on the western extreme of the ground, close to the limit of the campus, meets the scale affinity with the close enveloping limit, but its condition of small isolated pavilion allows to consider the position of a part of these houses in other areas of the campus, where they may make sense, mainly near the sports fields.
